KITCHENAID LAUNCHES NEW COMPACT COUNTERTOP OVEN

CHICAGO (March 8, 2016) – Offering the power and precision of a full-size oven at a fraction of the size, the latest KitchenAid compact countertop oven offers cooks a convenient way to take on all or part of virtually any culinary challenge. Like the brand’s high performance wall ovens and ranges, the new compact countertop oven features Even-Heat™ Technology for consistent heat throughout the chosen cycle. Its compact footprint allows for it to preheat faster and use less energy than a conventional full-size oven. A four-hour “stay on” option for warming or slow roasting automatically shuts off when the cycle ends.

Additional features include a 60-minute timer, two adjustable steel racks with seven height options, easy to clean non-stick interior and four preset functions for baking, broiling, toasting and keeping foods war. Design elements include a robust metal handle, large viewing window, sturdy door hinges and soft-grip control knobs. Accompanying accessories include a broil pan with grill rack and removable metal drip and crumb tray for easy cleanup.

Available in August at a suggested retail price of \$159.99, the new KitchenAid compact countertop oven will be offered in stainless steel and stainless steel with matte black finish.
